Pricing Model Overview

Lyngpakke AS | Owner: Pricing team | Version 2026.1 | Effective 1 January 2026

1. Purpose

This document explains how Lyngpakke AS calculates the price of a parcel sent within Norway. It is the main reference for the Pricing team, customer service and the developers of the pricing engine. Detailed rates are kept in the Weight and Size Price Table, and zone rules are kept in the Postal Zone Rules.

2. Price components

Every parcel price is built from the following components.

- Base price: set by the chargeable weight band in the Weight and Size Price Table.
- Agreement discount: a percentage that applies to the base price only, for business customers with an annual agreement.
- Zone multiplier: set by the delivery zone, from 1.00 for Zone A to 1.60 for Zone D.
- Fixed fees: home delivery of 49 NOK and the oversize surcharge of 150 NOK, when they apply.
- Fuel surcharge: 12.5 percent of the subtotal, from 1 January 2026.

2.1 Chargeable weight

The chargeable weight is the higher of the actual weight and the volumetric weight. Volumetric weight in kilograms is length times width times height in centimetres, divided by 5,000. Light but bulky parcels are therefore priced by the space they take up.

3. Calculation order

The pricing engine must apply the components in this order. Changing the order changes the result, so the order is part of the pricing rules.

1. Find the chargeable weight and look up the base price for its weight band.
2. Apply the agreement discount to the base price.
3. Multiply by the zone multiplier.
4. Add fixed fees such as home delivery and oversize.
5. Add the fuel surcharge as a percentage of the subtotal.
6. Round the final price to the nearest 0.50 NOK.

4. Rounding

Rounding happens once, at the end of the calculation. Intermediate results keep full precision. The final price is rounded to the nearest 0.50 NOK, and a value exactly halfway between two steps is rounded up.

5. Ownership and changes

The Pricing team owns all prices and rules. Rates are changed through the Master Data Admin portal, following the Admin Guide. Prices change twice a year at most, on 1 January and 1 July, and every change is listed in the Pricing Change Log.

6. Worked example

A business customer with a 10 percent agreement discount sends a parcel weighing 4 kg and measuring 40 by 30 by 30 cm. It goes from postal code 0150 to postal code 5020 with home delivery.

Step	Calculation	Result
Volumetric weight	40 × 30 × 30 / 5,000	7.2 kg
Chargeable weight	Higher of 4 kg and 7.2 kg	7.2 kg
Base price	Band 5–10 kg	179.00 NOK
Agreement discount	179.00 less 10 percent	161.10 NOK
Zone multiplier	Zone C, as the higher of A and C: × 1.35	217.49 NOK
Home delivery	+ 49.00	266.49 NOK
Fuel surcharge	+ 12.5 percent	299.80 NOK
Final price	Rounded to nearest 0.50	300.00 NOK

7. Out of scope

This model does not cover parcels over 35 kg, which are handled as freight, or parcels sent outside Norway.
